

**itelligence information days: A new form of product development!**

### **Integration of quality and environmental management into development processes**

Frankfurt, June 25, 2003 - itelligence AG, a full-service provider for SAP, is organizing a series of information days for its customers in Stuttgart, Hamburg and Cologne. The information days entitled "A new form of product development – integration of quality and environmental management into development processes" will focus on efficient quality and environmental management.

The integration of quality and environmental management into a company's processes is gaining in importance, given that early integration of quality and environmental management into product development processes results in significant benefits and cost savings. A series of lectures will show executives and decision-makers how quality and environmental management can be effectively mapped in a company's IT system landscape.

Lectures will range from "Process integration of quality and environmental management" to "Efficient formulation management" to the "Possibilities of integrated environmental management and gaining a competitive edge through quality - constantly higher product quality". In addition, several companies from the individual industries will share their practical experience with the participants.

"The information days will illustrate the advantages of an early integration of quality and environmental management – both in the form of measurable cost savings due to lower interface and licence costs and in the form of process optimization. Here we will focus on topics such as complaints management, mobile recording of results as well as categorization and transport of goods that have to meet special labelling requirements", Dr. Michael Sandmeier, lecturer and Managing Consultant Chemical and Pharmaceutical Industry of itelligence AG, said on the objectives of the information days.
